

## Remove leaf nodes in Tree

[Send Feedback](#)

Remove all leaf nodes from a given generic Tree. Leaf nodes are those nodes, which don't have any children.

**Note : Root will also be a leaf node if it doesn't have any child. You don't need to print the tree, just remove all leaf nodes and return the updated root.**

**Input format :**

Line 1 : Elements in level order form separated by space (as per done in class). Order is - `

Root\_data, n (No\_Of\_Child\_Of\_Root), n children, and so on for every element `

**Output Format :**

Elements are printed level wise, each level in new line (separated by space)

**Sample Input 1 :**

10 3 20 30 40 2 40 50 0 0 0 0

**Sample Output 1 : (Level wise, each level in new line)**

10  
20
